DiveTower is a system for dive shops. It handles everything. It starts when a customer books a dive. It continues through payment, pickup, the dive itself, and paying staff after. Every role in the shop gets its own app: owner, instructor, taxi driver, kitchen staff, boat crew. All these apps share the same information. If one person makes a change, everyone else sees it right away. Customers also get their own booking form and their own app for the whole trip.

DiveTower apps diagram

General

Ten languages

Everything a customer sees is available in ten languages: English, Thai, French, German, Dutch, Spanish, Italian, Chinese, Korean, and Japanese. This covers the booking form, confirmation emails, the customer app, and all waiver text. The system picks the right language automatically, based on what the customer chose. A shop can even set a different preparation video for each language, and each customer automatically sees the right one.

Who did what

The system keeps track of who did key actions. Every payment records who collected it. Every deleted booking records who deleted it, and why. Every salary payment records who marked it as paid. This makes it easy to check back later, if there is ever a question about something.

Keeping your data safe

Shop data is not stored on any one phone or computer. It is stored securely online. If a phone is lost or broken, no shop data is lost with it. The system saves a full backup automatically, every 30 minutes. This backup is kept in a separate, secure location — not the same place the everyday data lives. This means there are always two safe copies.

Works everywhere, even offline

Every app installs to a phone's home screen, like a normal app. No app store is needed. The staff apps, and the public booking form, still work with a weak or lost connection. Actions are saved and sent once the connection comes back. This means staff on a boat with bad signal are never blocked from doing their job.

Push notifications

Besides chat, DiveTower sends alerts to staff about things that need attention: a booking still missing an instructor, taxi, or boat for tomorrow; a late booking waiting for approval; a customer's insurance details, sent automatically before their dive day; and a review request, sent to customers after their trip.

The Master App

The Day tab

The Day tab shows every booking for the day. It shows who is diving. It shows their activity. It shows their language. It shows their instructor. It shows how they get picked up, and at what time. It shows their resort. It shows their meal. It shows which boat or trip they are on.

A master can add a new booking directly from this tab. Tapping "Add Booking" opens a form to enter customer details: name, email, phone, activity, date, instructor, resort, meal, and payment method. You can also take a deposit. For group bookings with multiple activities at different prices, the deposit is split proportionally by each activity's price. A master can manually override any person's deposit amount if needed.

You can give different dives of one activity to different instructors as well.

If something important is missing, the field turns red. This happens when: no instructor is set, no driver is set for a taxi pickup, no time is set for a boat pickup, no resort is set, no meal is set, or no boat is set.

For each day, you can create trips — a boat going out at a particular time, with a set number of dive slots (for example Confined, Dive 1, Dive 2). Each slot can be named freely, or set to "Confined" with one tap. Every booking card has a dropdown to assign that customer to one of the day's trips. If a booking needs a boat and has none assigned, the dropdown turns red, the same way other missing fields do. To save time, the trips of the day before are copied automatically.

You can select many bookings at once to set bulk changes.

Customer Details

Tapping a booking opens the full customer record. It shows contact details: language, email, phone, nationality, age, date of birth. There is a button to email the customer directly. It shows notes and who booked them.

It shows gear sizes: height, weight, shoe size. The app calculates BCD, wetsuit, and fin size from these numbers. It shows their diving level, how many dives they have done, and their last dive. It shows their meal. It shows badges for liability waiver, medical form, and snorkel waiver — each one shows signed or not signed. A clear warning badge shows if the customer has a medical issue. If a customer already has a doctor's fit-to-dive declaration, they can upload a photo of it instead of just ticking the medical box. This can be several pages. If a booking is cancelled, a refund banner appears, with a button to undo it. From this screen, staff can also move the booking to a new date, see all past payments, get a link to send the customer, or show a QR code for the customer's own app.

Fun Dive 4 - Marian Snorkeling ✓

Week tab shows the same booking information for a full week.

Money Overview

Shows all the shop's money information in one place. Four boxes are always shown, no matter which time period is selected: money paid today, money still owed by customers, money owed to agents and resorts, and refunds that still need a decision. If a customer pays an agent directly, that amount is removed from what the shop owes the agent — this happens automatically. Below the boxes, staff can pick a longer period: a week, a month, a year, or a custom range. For a single day, this shows a simple list of payments. For a longer period, it shows income and unpaid amounts, broken down six ways: by activity, by payment method, by instructor, by nationality, by language, and by resort. Each breakdown has a table and a bar chart. There is also a meal count, a payment method summary, and totals for customers, revenue, paid, and open amounts. Staff can also send an invoice from here — for a single customer, or a combined invoice for an entire group of bookings from one agent or resort, listing every student, date, and activity.

The Salary tab

The Salary tab shows, for each instructor, what they are owed and what is still pending. The “owed” list is a table. It shows date, customer, activity, a small icon for dive progress, and the salary or commission amount. Each instructor gets a subtotal. One

button marks everything as paid. A second list shows work that is not finished yet — this is kept separate so it does not get mixed up with money that is ready to pay. When two instructors share one day, each instructor is only paid for their own part of the work. If nothing shows on either list, a “why?” link explains the reason.

The Ratings tab shows customer feedback from post-dive rating emails. Customers rate their general experience (1-5 stars) and instructor (1-5 stars). It displays mean ratings

overall, by activity, and by instructor. It shows the click-through rate to Google reviews (customers who gave both ratings 5 stars). The ratings table shows each customer's name, activity, dive date, general rating (1-5), instructor name, instructor rating (1-5), and the date they clicked the Google review link. Ratings are collected automatically the day after each customer's last dive.

The Search tab

The Search tab lets you search customers using more than 20 fields. Some are dropdowns: nationality, language, dive level, meal, activity, booking source, who booked them, payment method, resort, instructor. Some are free text: name, email, phone, passport, room, notes. Some are yes/no filters: medical issue, certified, registered with agency, own gear, snorkel waiver signed, e-learning done.

The DiveAgency tab

The DiveAgency tab has two simple lists. One list shows customers who still need agency registration. The other list shows customers who still need their certification finished. Each row shows name, activity, email, date of birth, date, and instructor. There is a button to mark it done, and a button to dismiss it.

The Gear tab

The Gear tab shows shortage alerts at the top. Below that is the result of the shop's automatic gear allocation for the day. Below that is the full equipment list — item names and counts come from ScubaKit automatically, synced in every 15 minutes, so nothing needs entering by hand. If a customer's height, weight, or shoe size is missing, staff get an alert. This way, nobody is left without gear assigned. Staff can set a rental price for each item.

The Private Boat tab

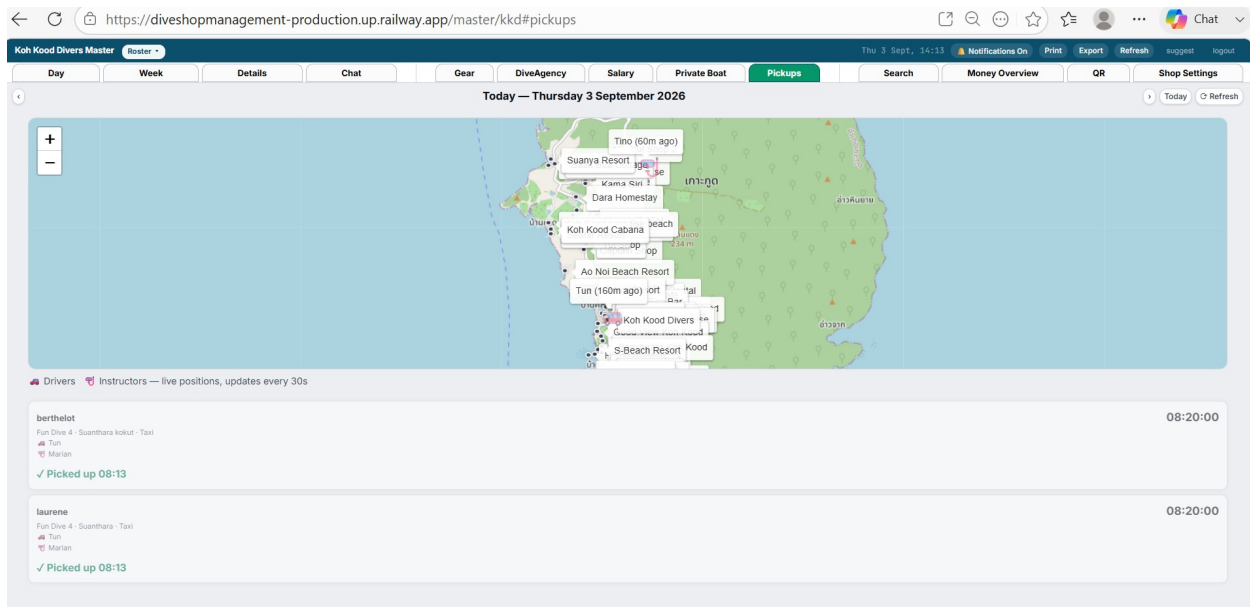

The Private Boat tab is a form to book a whole boat for a group. It is separate from normal activity bookings, because people on a private boat may not have their activities decided yet. It asks for: date, boat, an optional lead booker name, their email, their WhatsApp, number of people, the boat fee, and payment method.

The screenshot shows the 'Private Boat' tab in the 'Koh Kood Divers Master' application. The interface includes a top navigation bar with tabs for Day, Week, Details, Chat, Gear, DiveAgency, Salary, Private Boat (selected), Pickups, and Search. The main content area is titled 'Thursday 3 September 2026' and contains a form for booking a private boat. The form includes a title 'BOOK PRIVATE BOAT' with a sub-description: 'Renting out a boat to a group — not an activity itself. People on the boat may each have their own activity (or none yet). Fill in names and activities later from the Day tab as they're known.' The form fields are: DATE (03/09/2026), BOAT (Select boat), AGENT / RESORT (OPTIONAL) (None (direct booking)), LEAD BOOKER NAME (OPTIONAL) (Full name), EMAIL (email@example.com), CONTACT / WHATSAPP (+66...), NUMBER OF PEOPLE (0), BOAT FEE (0), and PAYMENT METHOD (—). A 'Create Private Boat Booking' button is at the bottom.

[

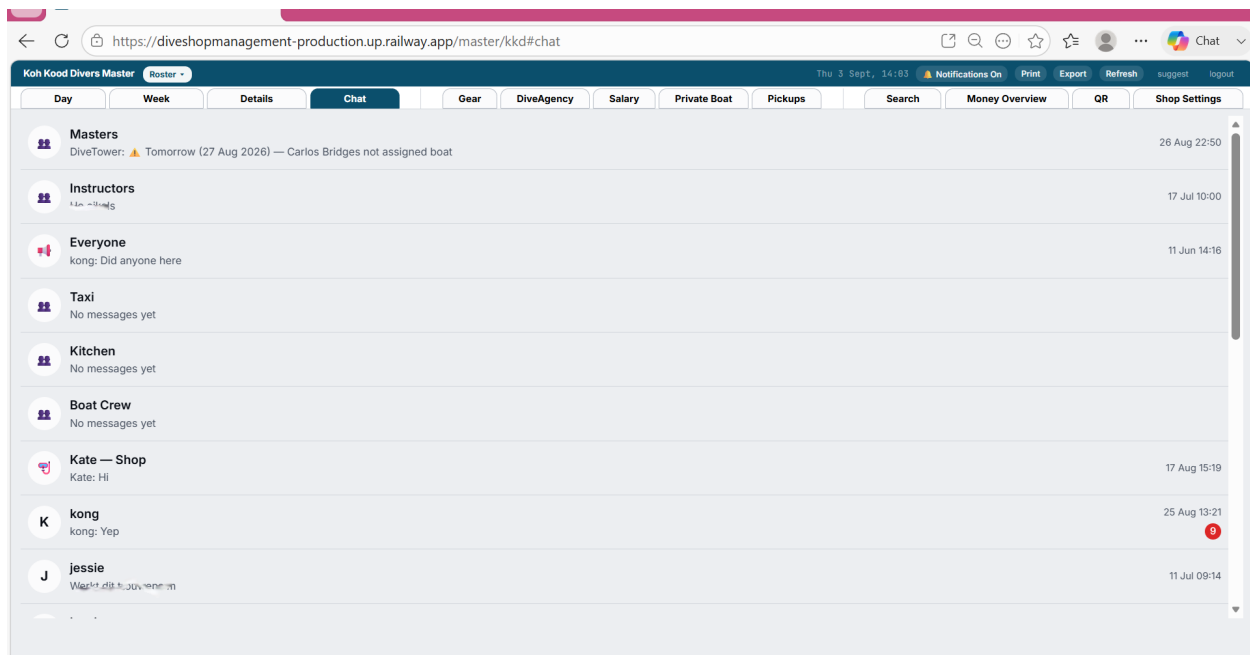

The Pickups tab

The Pickups tab shows a live map. It shows every driver and every instructor's current position. It updates every 30 seconds. There is also a simple list view.

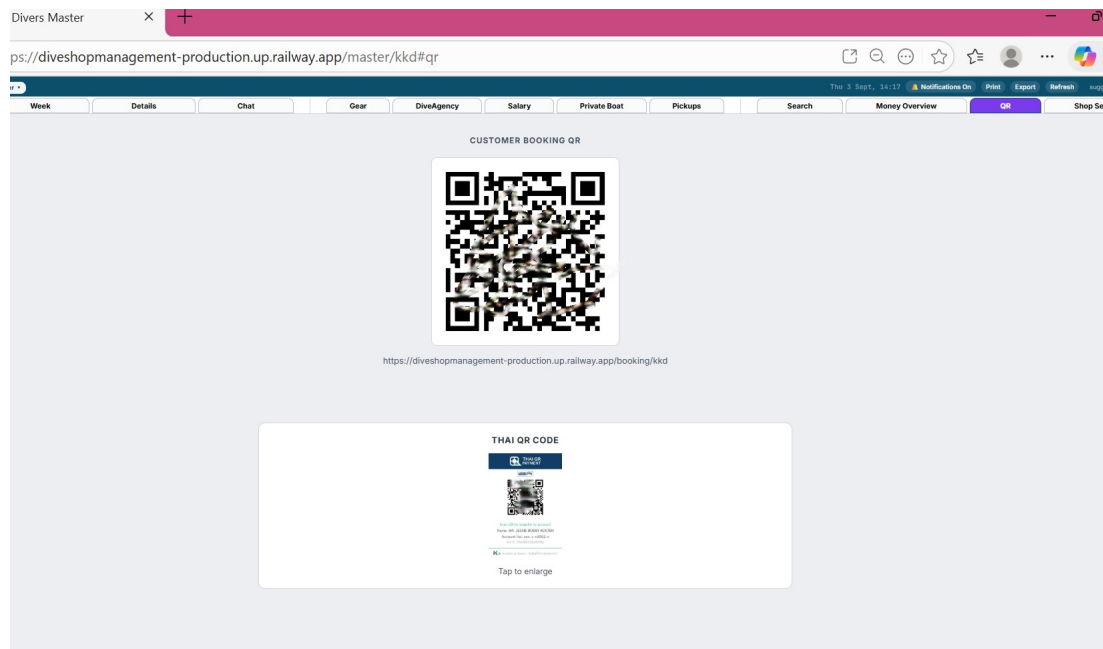

Chat

Chat works inside the master app too. There are group channels for each role: Masters, Instructors, Taxi, Kitchen, Boat Crew. There are direct one-to-one messages. There are also customer chats — one for general shop questions, and a second one that goes straight to the customer's current instructor. Chat supports photos. It shows if a message has been read. It shows an unread count in the app. On phones that support it, it also shows a badge on the home screen icon.

The QR tab

The QR tab has QR codes for the shop, for each instructor, and for each resort's own booking page.

The top bar

The top bar is always visible, no matter which tab is open. It shows the current date and time. It has a button to turn on notifications. It has a Refresh button to reload the current tab. Both of these work on phone and computer. On a computer screen, there are three more buttons. Print prints whatever tab is open right now. Export downloads the current tab's data as a spreadsheet file. This works for the Day tab, Details, Gear, Salary, Money Overview, Shop Settings, and DiveAgency. A "suggest" button sends feedback straight to DiveTower. There is also a Roster button. This opens a menu to print a clean roster for any single boat.

Team & Staff

Team & Staff

Manages every role. Masters need a name, email, and password. Instructors also need: agency registration number, phone, WhatsApp, email, commission rate, nationality, languages, a photo, a toggle for logging in on days off, whether they're allowed to offer Pay Later on their own bookings, whether their own app shows their QR code, whether their own app shows an "Open booking form" button, and a date range for when they are unavailable. Drivers are the same, but instead of languages they have a maximum passenger number. Boat crew have the same Pay Later and QR/booking-link toggles as instructors and drivers, but no day-off login toggle. Kitchen staff just need name, phone, WhatsApp, email, and password. Boat types are also set up here: name and passenger capacity. Each role also gets its own QR code, so a new staff member can install their app right away.

The screenshot displays the 'Team & Staff' management interface. It is divided into three main sections: Masters, Instructors, and Drivers.

Masters Section: This section has a form with three input fields: NAME, EMAIL, and PASSWORD. Below the form is an 'Add masters...' button and a 'Save' button.

Instructors Section: This section contains a table with the following columns: NAME, PADI NR, PHONE, WA, EMAIL, COMM %, NATIONALITY, LANGUAGES, PHOTO, QR, SHOW QR, SHOW LINK, CAN LOG IN ANYTIME, PAY LATER ALLOWED, and PASSWORD. The table lists six instructors with their respective details. Below the table is an 'Add instructors...' button and a 'Save' button.

Drivers Section: This section contains a table with the following columns: NAME, MAX PEOPLE, PHONE, WA, EMAIL, COMM %, QR, SHOW QR, SHOW LINK, CAN LOG IN ANYTIME, PAY LATER ALLOWED, and PASSWORD. The table lists one driver, Pong, with their details. Below the table is an 'Add drivers...' button and a 'Save' button.

Resorts & Agents

Stores each resort's pickup time, email, an automatic booking link and QR code, and their commission rate. Agents get a name, email, and commission rate. A separate table holds the shop's general commission rates. These can be changed for a specific resort or a specific activity. You can also enter a booking from an agent or resort using a fast form: pick the agent, pick the date, and list the people. There is a shortcut to add

several people at once, if they are all doing the same activity and do not need to be named yet.

Activities & Pricing

Sets up everything about one activity in a single place: price, number of days, salary, certification cost, which agency it belongs to, whether it needs another certification first, and salary per dive. Right below that, the same screen also sets the activity's day-by-day structure --- which dive slots happen on which day, and what gear each day needs. Number of dives is worked out automatically from that structure, not entered separately. Instructors see this as a checklist and check items off as the course happens.

Activities & Pricing

Close

Everything about one activity lives in its own card below — price, instructor pay, agency, and its day-by-day structure (which slots happen on which day, and what gear each day needs).

Special Fee Day

For marine park or national park fees. A shop can set one or more date ranges, each with its own pattern. Ranges cannot overlap. There are separate fees for diving and snorkeling. Each of those splits into four amounts: local adult, local child, foreign adult, foreign child. Staff can also turn the fee on or off manually for any single day.

https://diveshopmanagement-production.up.railway.app/master/kkd#constants

Chat

Special Fee Day

Close

An extra fee added to bookings on days you designate as special fee days (e.g. marine park, national park entry fee). Toggle per day in the Day tab. Set a schedule to pre-tick the toggle automatically.

SCHEDULES — when is the fee active?

Add one or more date ranges, each with its own day pattern. Leave "Until" blank for an ongoing/ current schedule. Ranges must not overlap — past bookings already keep whatever fee applied on their date, so editing or adding schedules here never changes history.

Payments

Lists every payment method the shop accepts: cash, QR codes, and five online providers (Stripe, PayPal, PayMongo, Opn, HitPay). Each online provider needs a connection link, set up once with that provider. This section also has the shop's currency (the full list of world currencies, over 100), and manual exchange rates for US dollars and euros. We can help you setting up other providers as well.

The screenshot shows a web application interface for managing payments. At the top, there are three tabs: 'Course Videos', 'Locations', and 'Shop Info & Account'. The 'Payments' section is active, showing a list of payment methods. Each method has an 'Edit' button and a 'Delete' button. The methods listed are: Revolut (QR code), Wise (QR code), Credit Card (Cash / manual), Cash direct to Jess (Cash / manual), PAID AT RESORT (Cash / manual), Bank Transfer (Cash / manual), Thai QR code (QR code), Stripe (Online — ?), Pay Later (Cash / manual - no claim), Cash: Has Paid (Cash / manual), and Deposit (Cash / manual - no claim). Below the list is a '+ Add payment method' button. The bottom section is titled 'CURRENCY & CONVERSION RATES' and contains a form for setting the shop's currency and conversion rates. The currency is set to 'Thai Baht (฿) — THB'. The conversion rates are: 1 USD = ? local (33) and 1 EUR = ? local (38).

Payment Method	Type	Edit	Delete
Revolut	QR code	Edit	Delete
Wise	QR code	Edit	Delete
Credit Card	Cash / manual	Edit	Delete

Pay Later	Cash / manual - no claim	Edit	Delete
Cash: Has Paid	Cash / manual	Edit	Delete
Deposit	Cash / manual - no claim	Edit	Delete

+ Add payment method

CURRENCY & CONVERSION RATES

Your shop's currency, plus conversion rates used when third-party platforms send amounts in a foreign currency (e.g. Paditravel sends USD). Update rates when they drift significantly.

Currency: Thai Baht (฿) — THB

1 USD = ? local: 33

1 EUR = ? local: 38

Gear & Equipment

Shows every item and size in the shop's ScubaKit, synced in automatically every 15 minutes — nothing to add or manage here directly. It shows total count, broken/unusable count, and available count (calculated automatically, with a color warning when low). You can set the rental price shown to customers. If ScubaKit has an item under a name the system doesn't recognize yet — say, gear entered in a different language — staff get a one-time prompt to say what it actually is. Confirmed once, remembered from then on.

THIRD-PARTY BOOKING SOURCES

Platforms that send booking emails automatically. The system matches inbound emails by sender address and creates bookings. Contact your DiveBase admin when adding a new platform — a parser needs to be set up.

No sources configured.

+ Add source

EMAIL FORWARDING

Forward your booking-platform emails (Viator, GetYourGuide, Paditravel) and PADI's own registration/certification emails here — they get parsed and applied automatically. Skip this and those need entering manually.

kk4@mail.divebase.com

Waivers

Covers the cancellation policy: how many days' notice is needed, and the time cutoff for when last bookings of the day are accepted. Staff can see exactly what text the customer will read. Shops can upload their own waiver documents instead of using the built-in ones. All waiver text is available in every supported language.

The screenshot shows the 'Waivers' section of the Diveshop Management app. The interface includes a top navigation bar with icons for Team & Staff, Resorts & Agents, Activities & Pricing, Special Fee Day, Payments, Day Templates, Gear & Equipment, Booking Sources, Waivers, and Course Videos. Below this is a sub-navigation bar with icons for Locations and Shop Info & Account. The main content area is titled 'Waivers' and contains several sections: 1. 'CANCELLATION & EQUIPMENT POLICY' with a description and input fields for 'Days before activity' (set to 1) and 'Cutoff time' (set to 16:00). 2. 'CUSTOM WAIVER DOCUMENTS' with upload buttons for 'Snorkel waiver', 'Diving liability waiver', and 'Medical statement'. 3. 'WAIVERS & MEDICAL TEXT' with a language selector showing 'English' selected and other options like Español, Français, Italiano, Nederlands, Deutsch, etc. 4. 'LIABILITY RELEASE' at the bottom.

Course Videos

A shop can add one or more videos to any course. Each video has:

- A **name** you choose (e.g. "Theory video PADI")
- An **agency** (PADI, SSI, etc.) — or "Any" if it's for everyone
- The **courses** it belongs to
- A **link** for each language

A course can have more than one video (for example: one theory video and one skills video). If a student's agency has no matching video, they are shown the "Any" video instead. If there is no video at all for that course, nothing is shown.

Locations

Manages the shop's map. Each business added gets a name, a category, a pin on the map, a description, and an optional discount code. Shops create their own categories, each with an emoji and a name.

Shop Info & Account

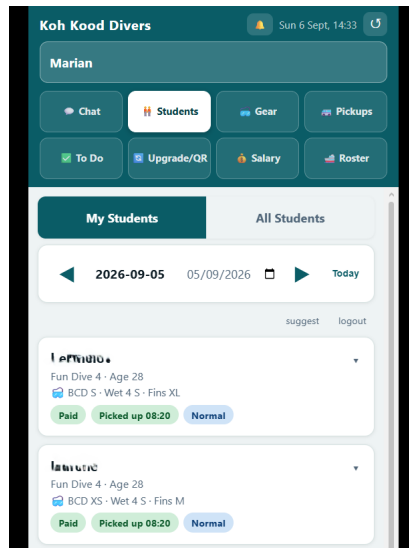

Holds: certifying agency, shop name, WhatsApp number, email sender name, main email, a separate email for insurance notices, timezone, the meal list, and links to Google reviews and Google Maps.

Instructor app

Students

A toggle switches between "My Students" (just this instructor's own) and "All Students" for the day. Every student appears as its own card. Tapping a card opens the full detail: meal and dietary note, certification level, number of dives, nationality, age, height, weight, shoe size, and notes. If the booking is cancelled, a refund banner appears, with an undo button; if not, there is a button to start a refund. A checklist covers confined water, each numbered dive, and the night dive, matched to whatever that activity's own day-by-day structure actually has. Each dive can have its own instructor, different from the day's main one. Any custom dive types the shop has added also appear here. A waivers section shows whether liability, safe-diving, medical, and youth waivers are signed. For certification courses, there is a section for e-learning, agency registration, the agency code, and final certification. Students on an SSI Open Water course also get their full completion record here: every session and skill, plus both signatures. P

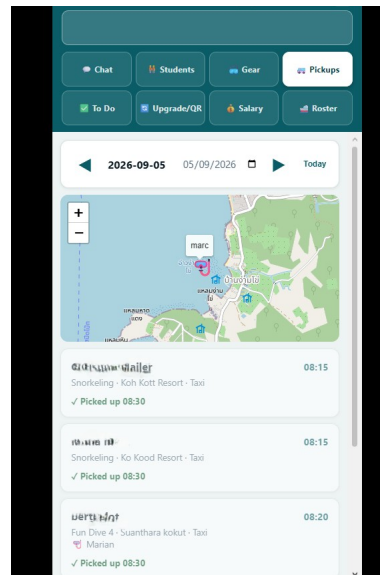

Gear

Shows gear four ways: this instructor's own students first (sizes, or a note that they bring their own gear, plus any rentals), then every boat for the day grouped together regardless of instructor, then a shop-wide count of how many of each item are needed today against how many are actually usable, flagging any shortage. Below that is the full inventory, synced from ScubaKit, read-only here.

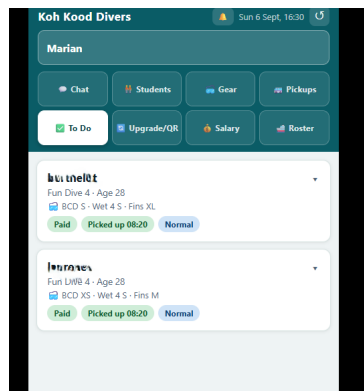

Shows the same live driver map and pickup list available in the master app's Pickups tab, scoped to what's relevant for this instructor's day. A "Call a driver" button lets the instructor call or WhatsApp any driver directly, right from the app.

To Do

A filtered list of exactly which students still need something today: an outstanding balance, a missing waiver, missing e-learning or registration for a certification course, or an incomplete SSI completion record. Anyone with nothing outstanding simply does not appear.

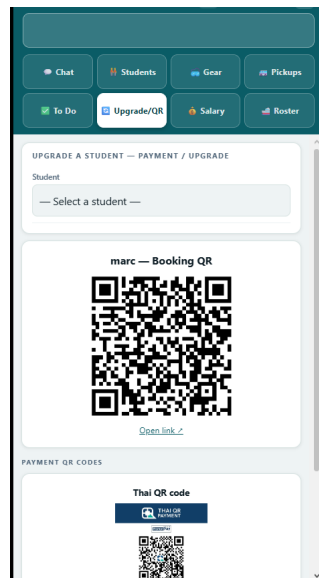

Upgrade/QR

Where an instructor actually collects money. Selecting a student shows their outstanding balance, with a way to record what was received and how, or show a QR code for the student to pay directly. The same screen lets the instructor upgrade a

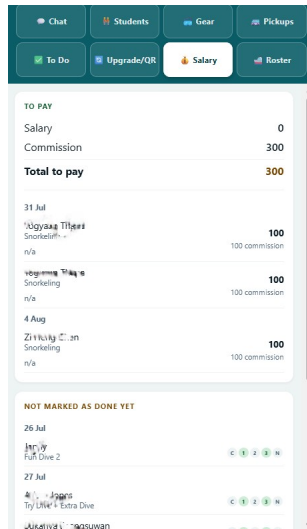

student to a different activity, entering the new price and optionally collecting a deposit for it on the spot.

Below that is the instructor's own personal booking QR code and link — bookings made through it are tracked back to that instructor for commission.

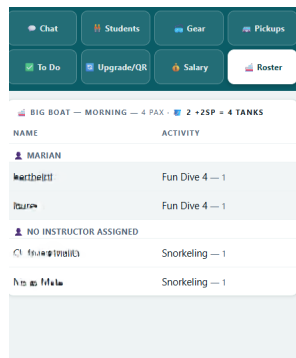

Salary

Shows what this instructor is owed: total salary and commission, then a breakdown per student with a row of small dots showing exactly which dives are marked done. A separate section covers work that is not eligible for payment yet, because it has not been marked done — the same rule the master app's Salary tab uses to decide what is actually payable.

Roster

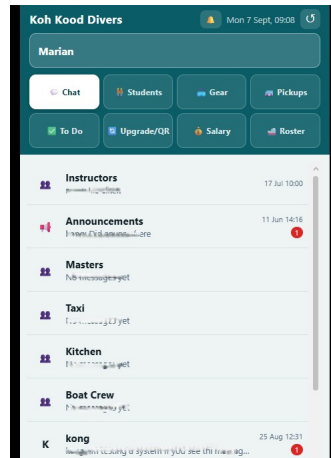

A shop-wide view of every trip for the day, not just this instructor's own — everyone's boat, pax count, and tank count in one place. Each trip lists the boatmaster, then every student grouped by which instructor is running them, with any per-dive instructor difference shown as a small note under that student. Useful for a boat crew member or an instructor checking who else is out that day, not just their own students.

Chat

The same group channels as the master app — Masters, Instructors, Taxi, Kitchen, Boat Crew — plus direct messages to anyone in them, and the same customer chats,

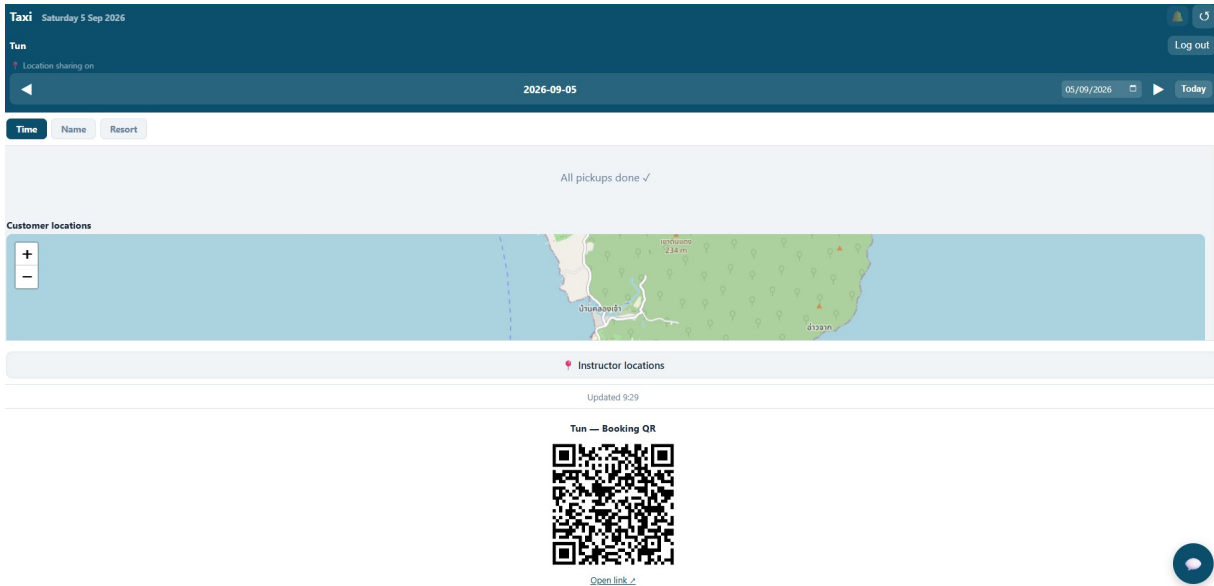

scoped to this instructor's own students rather than every customer in the shop. An Announcements thread receives anything broadcast to everyone.

Taxi app

Pickups

Pickups shows a sorted list of who to pick up and when. Each card shows the resort (with a color), room number, and activity. There are one-tap buttons to call or WhatsApp the customer. There is a button to mark them picked up. Finished pickups turn grey but stay visible, until every pickup for the day is done.

Return drop-offs

A separate list. It groups by trip. It sorts by which boat is arriving soonest. Each student has their own "dropped off" button.

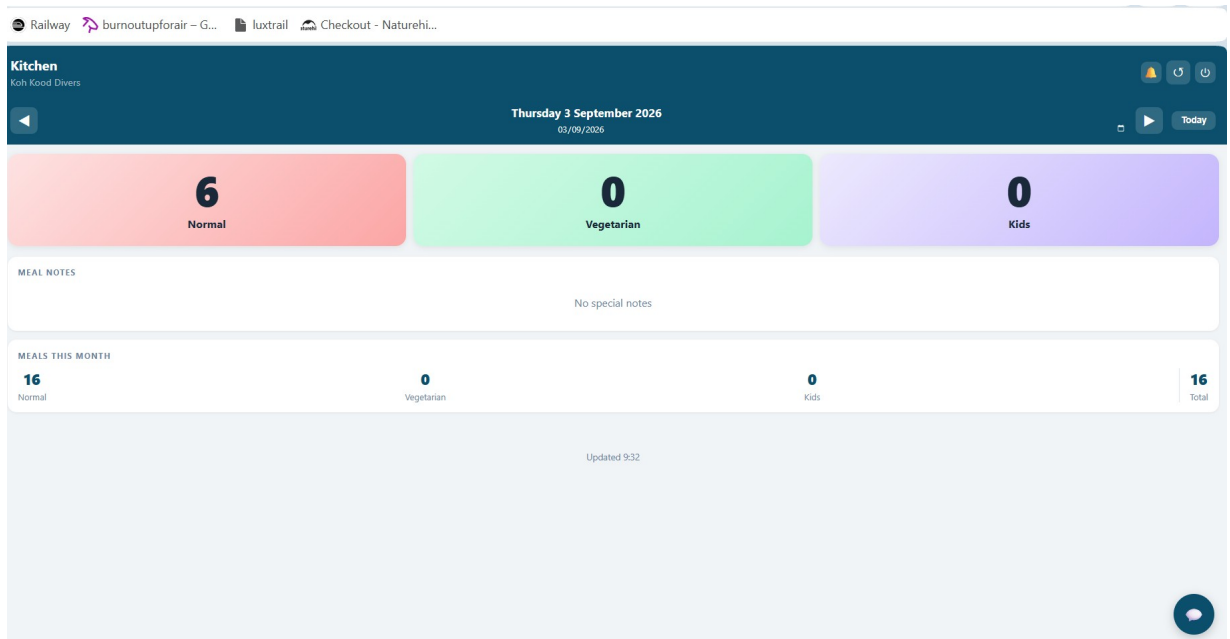

Shows the live location of any customer who has chosen to share it. It updates every 30 seconds. A separate map shows the current location of every instructor, so a driver can see where they are too.

Chat

The same group channels as the other apps — Masters, Instructors, Taxi, Kitchen, Boat Crew — plus direct messages to anyone in them, using the driver's own real name, since drivers log in individually now, not a shared identity. There are no customer-specific chat threads here, unlike the instructor app.

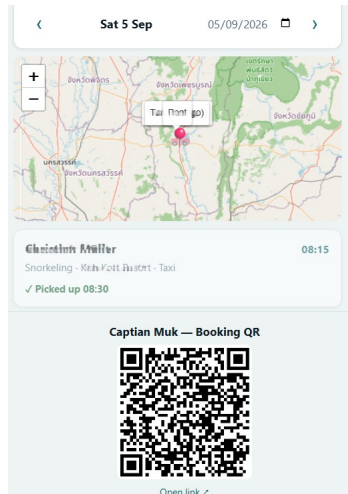

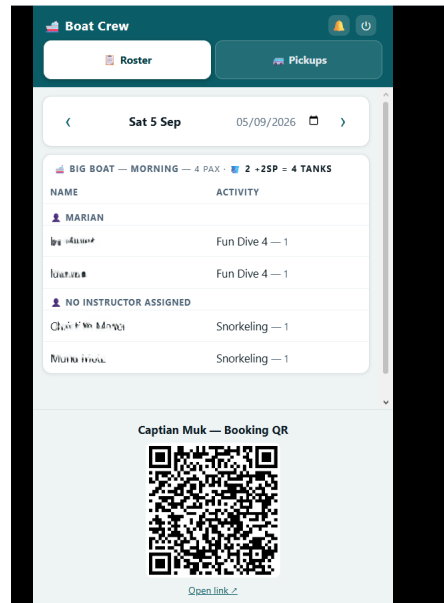

Kitchen app

The kitchen app is one simple screen. It shows live counts for each meal type needed that day and a montly count It shows a list of customers with special dietary notes. It refreshes on its own every two minutes.

[Boat crew app

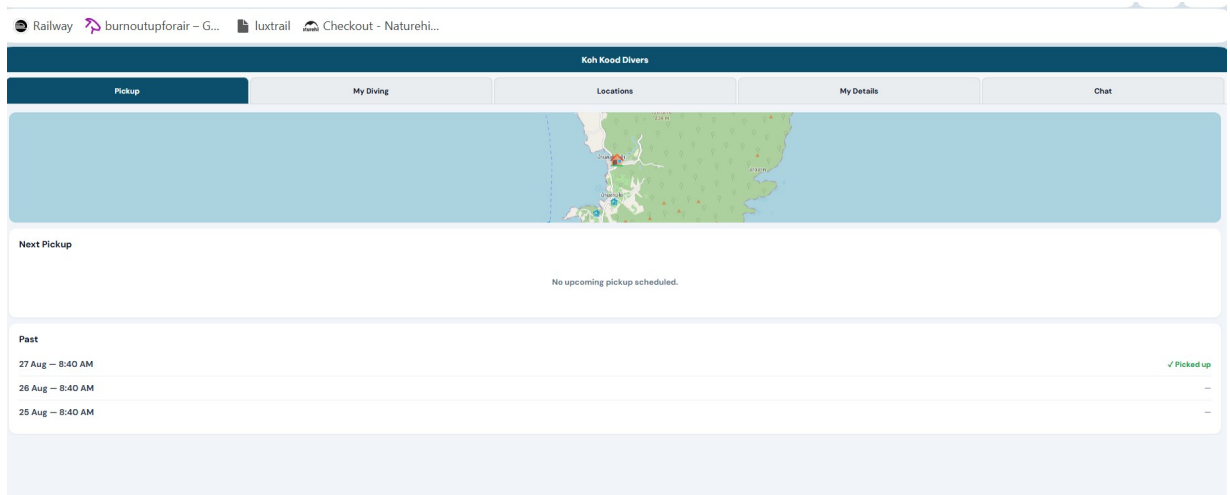

The boat crew app is small. It has chat, the same trip roster that instructors and masters see, and a pickups view with a live driver map. It also shows the personal QR code for bookings.

Customer app

Pickup tab

Shows their next pickup time, once one is set. There is a button to share their live location, so the driver can find them. Once a driver is on the way, a map appears showing the driver's position and the customer's own position, so they can watch the driver approach. It also shows their past pickups.

Video

It shows a button to watch a preparation video, matched to their language and agency — sometimes two, a theory one and a skills one. If there is no exact match, it falls back

to a good choice.

Theory

There is a button for a summary of the open water theory text, with practice questions.

This is your dive equipment.

Regulator: The device that allows you to breathe underwater. It has two stages – the first stage attaches to your tank, and the second stage you hold in your mouth. The most important feature is how easy it is to breathe from it. There is also an Alternate Air Source (often yellow) for sharing air with your buddy. You should place it in the triangle under your chin and your ribs.

Console: You will also have a console with at least a pressure gauge, and often a depth gauge.

BCD: A Buoyancy Control Device, a vest that holds your tank and that you can inflate or deflate to control your buoyancy.

Low-pressure hose or Low-pressure inflator (LP): To inflate your BCD.

Weight belt: You can find the right amount of weight by performing a buoyancy test, where you should float at eye level holding a normal breath with an empty BCD.

Mask: A scuba mask must enclose your nose, which is why you cannot dive with swimming goggles.

Fins and a snorkel: You also have these essential pieces of equipment for underwater mobility and breathing on the surface.

1. What is a regulator?

- A) A vest that holds your tank
- B) A device that allows you to breathe underwater
- C) A device that controls your buoyancy
- D) A device that measures your depth

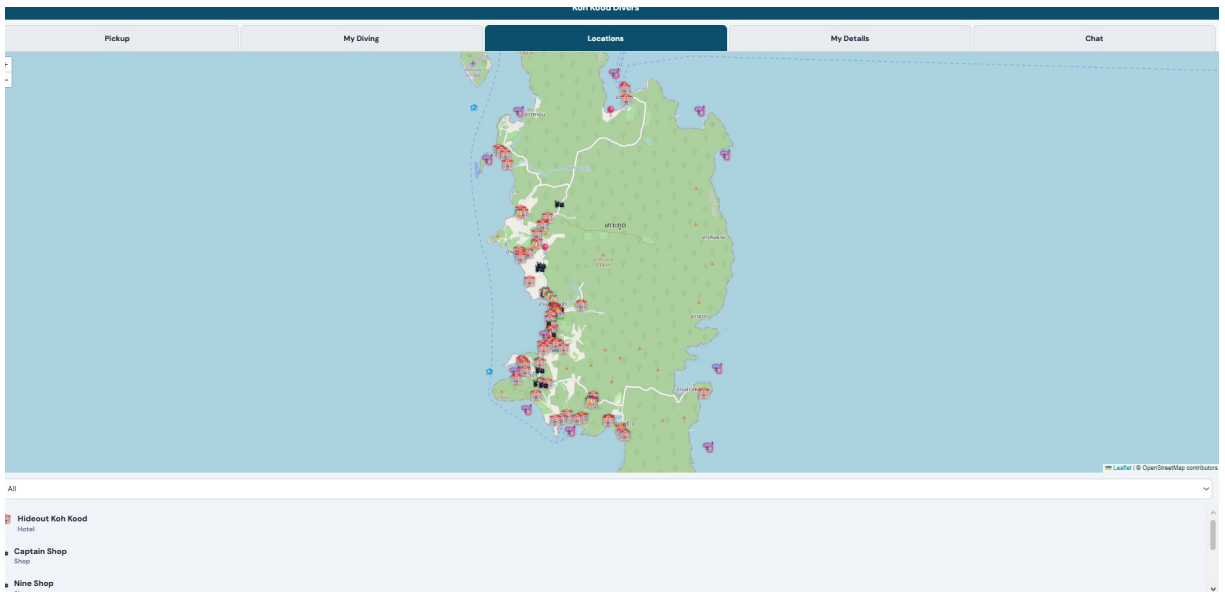

2. Where do you put the first stage of a regulator?

- A) In your mouth
 - B) On your BCD
-

It may show a QR code (and a link version of it) confirming agency certification. It shows a day-by-day schedule: which boat and which instructor each day. It shows a progress section: e-learning status if they are registered, a checkmark for each finished dive, and an overall percentage. It shows their gear: either "own gear," or their exact BCD, wetsuit, fin, and weightbelt sizes. SSI Open Water students also see their own copy of the completion record here. They cannot edit it, except they can add their own signature. They can also clear their signature if it was added by mistake.

Locations tab

Shows a map. The shop's own location is always pinned. Every other business the shop has added is also shown, each with its own icon for its category. Below the map, the same places are listed in full, with description and discount code shown directly.

My Details tab

Shows a payment summary — total, paid, and balance — followed by the customer's full booking information, which they can edit here. This is the same form used everywhere else in the system.

Chat tab

Lets the customer message the shop. Once they have a current instructor, they can also message that instructor directly, as a second option.

Public booking form

A customer booking online picks a date. They add one or more people to the booking. Each person needs a name, an email, and an activity. Prices show live as they pick. They can also add rental gear. If an activity needs an existing certification, the form checks this automatically. It will not let them continue until they confirm it.

A screenshot of a 'Public booking form' for Koh Kood Divers. The form is divided into three main sections: 'PERSONAL', 'DIVE EXPERIENCE', and 'PICKUP'. The 'PERSONAL' section includes fields for 'Full name', 'Email' (with a placeholder 'your@email.com'), 'Nationality', 'Passport number', 'Language' (a dropdown menu with 'Select' as the current selection), 'Date of Birth' (with a date picker showing 'dd/mm/yyyy'), 'Shoe size (EU)', 'Height (cm)', and 'Weight (kg)'. The 'DIVE EXPERIENCE' section includes a 'Certification level' dropdown (set to 'None / Not certified'), 'Number of dives' (a numeric input field), and 'Last dive (months ago)' (a dropdown menu with 'months' as the current selection). The 'PICKUP' section includes a 'Resort / hotel' dropdown menu.

A review screen then shows: each person's price, any rentals, the total, the date, and the payment method. This is shown before they pay. Checkout supports five payment providers, so a shop does not depend on just one. If someone tries to book too late in

the evening for a same-day or next-day slot, the system explains why. It offers the next date that is actually free.

Staff booking a customer in person get two extra things. First, a lookup that finds returning customers by name and fills in their details. Second, the ability to add a discount or pay later.
